

# US Extremely Large Telescope Program

*Lucas Macri*

Project Director

US-ELTP | NSF's NOIRLab

# Emerging Global Consensus: ELTs are the future of ground-based optical/IR astronomy

**E-ELT**

**US-ELTP**

**TMT**

**GMT**

**NOIRLab**

**All US astronomers should benefit from national participation in a US ELT Program**

- Enable **transformational science** through US access to a bi-hemispheric ELT system
- Enable and support large-scale, systematic, collaborative research (**Key Science Programs**)
- Provide **outstanding user support** commensurate with the proposed US-ELTP investment
- **Broaden participation in TMT+GMT science** and foster research inclusivity
- **Engage and represent the whole US community** in GMT+TMT governance, scientific planning, and instrumentation development

# The Power of Two

- **Key Science Programs (KSPs)**
  - **Scientific legacy** through systematic investment in **large-scale, transformative research projects**
  - Projects on scales difficult to realize within time shares of current GMT+TMT partners
  - **Broad, inclusive scientist participation** in KSPs via open collaboration models
  - Data products with **high archival reuse value**
- **Discovery Science Programs (DSPs)**
  - Smaller PI-class proposals, allocated more frequently
  - Nimble, responsive to new discoveries, new opportunities, new ideas
- **Archival Research**
  - Community research using **all archived data** from TMT+GMT

**Extrasolar Planets  
and the Search for  
Extraterrestrial Life**

**The Dark Universe  
and Physics Beyond  
the Standard Model**

Actual, future KSPs would be selected by peer review

**Extreme Gravity: from  
Gravitational Waves  
to Supermassive  
Black Holes**

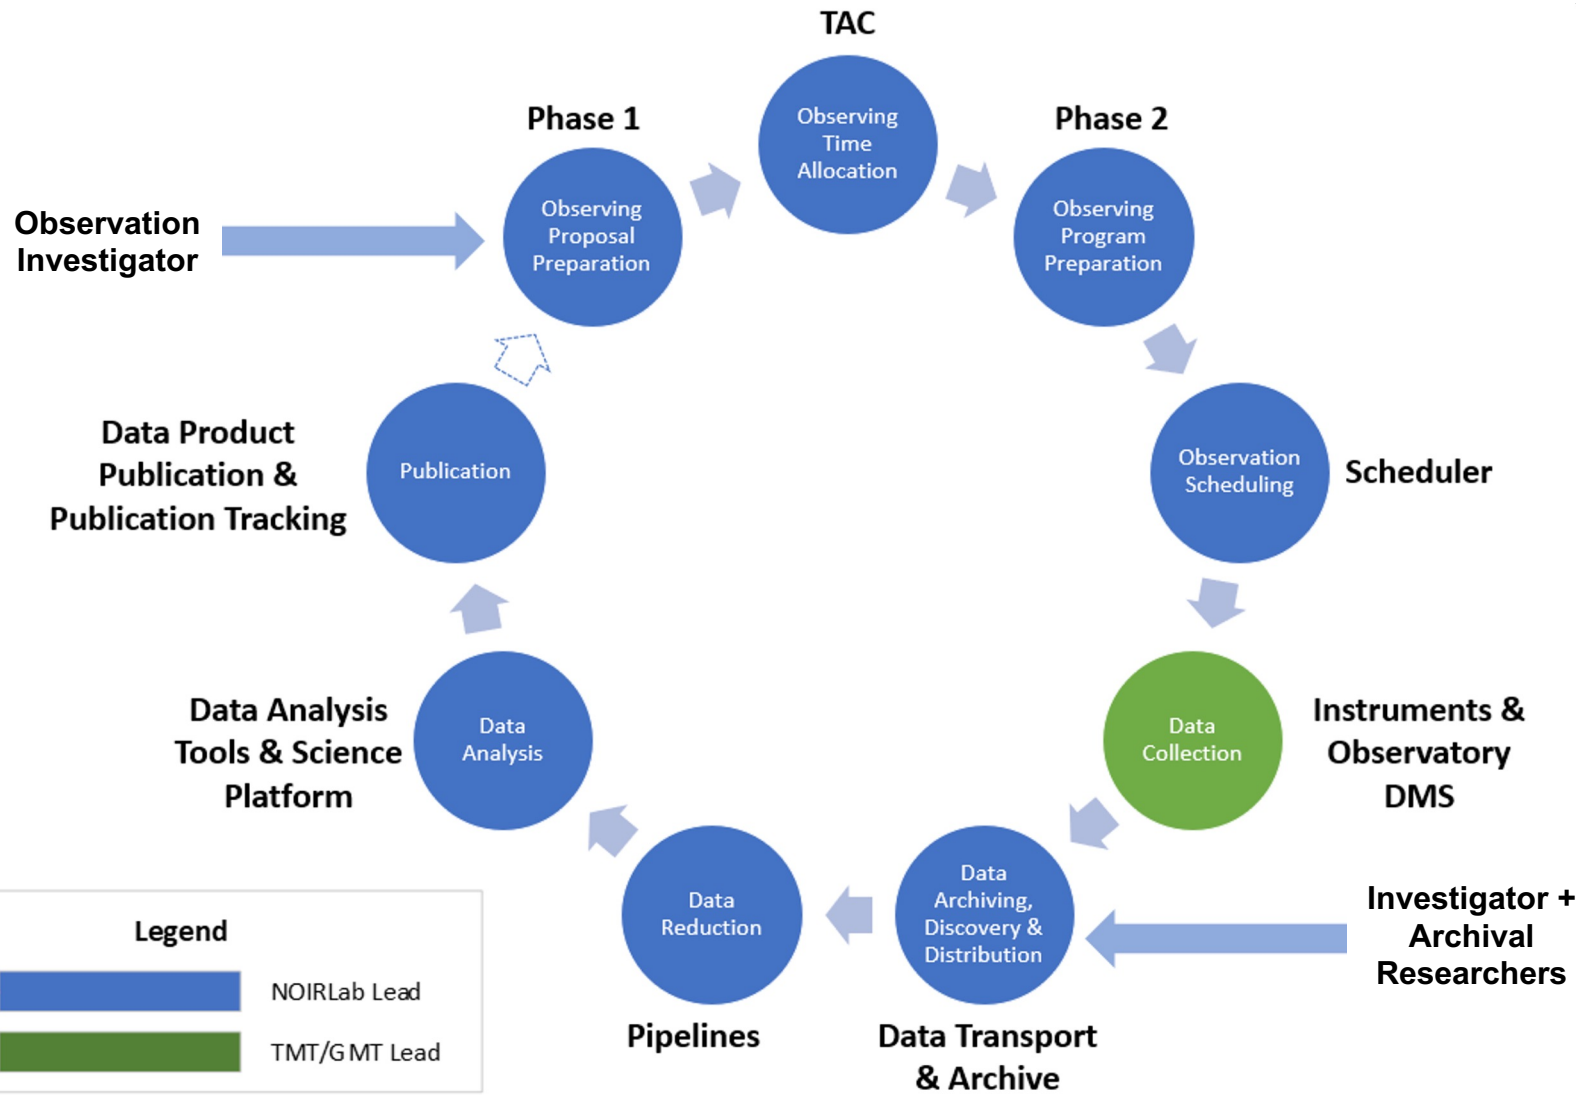

**Resolving the  
Physics of Galaxy  
Evolution**

+ Solar System, Stars & Stellar Evolution, Explosive Transients, and more

**Research Inclusion** is central to NOIRLab's US-ELTP mission to enable participation by all astronomers in TMT and GMT science

- Particularly directed toward researchers at **smaller and/or under-resourced institutions (SUIs)**
- **Science-ready data products** will make GMT and TMT more accessible to all observers
- **Archival research creates science opportunities** that scale beyond the bounds of PI observing, and involves researchers from a broader range of institutions
- US-ELTP Data Science Suite will provide an **open platform for user training in data analysis**
- **Key Science Program teams** will be organized following **open collaboration models**
- Research inclusion will be an element of Key Science Program merit review

# Science Data Life Cycle

- NOIRLab will provide user support systems and tools for researchers using GMT, TMT and their data throughout the **Science Data Life Cycle (SDLC)**
- Support will be provided by the **US-ELT Program Platform (UPP)**
- Provide researchers with uniform interfaces to TMT, GMT and their data
- NOIRLab's services and tools will be available to all GMT and TMT partners

# Guiding Principles for the UPP

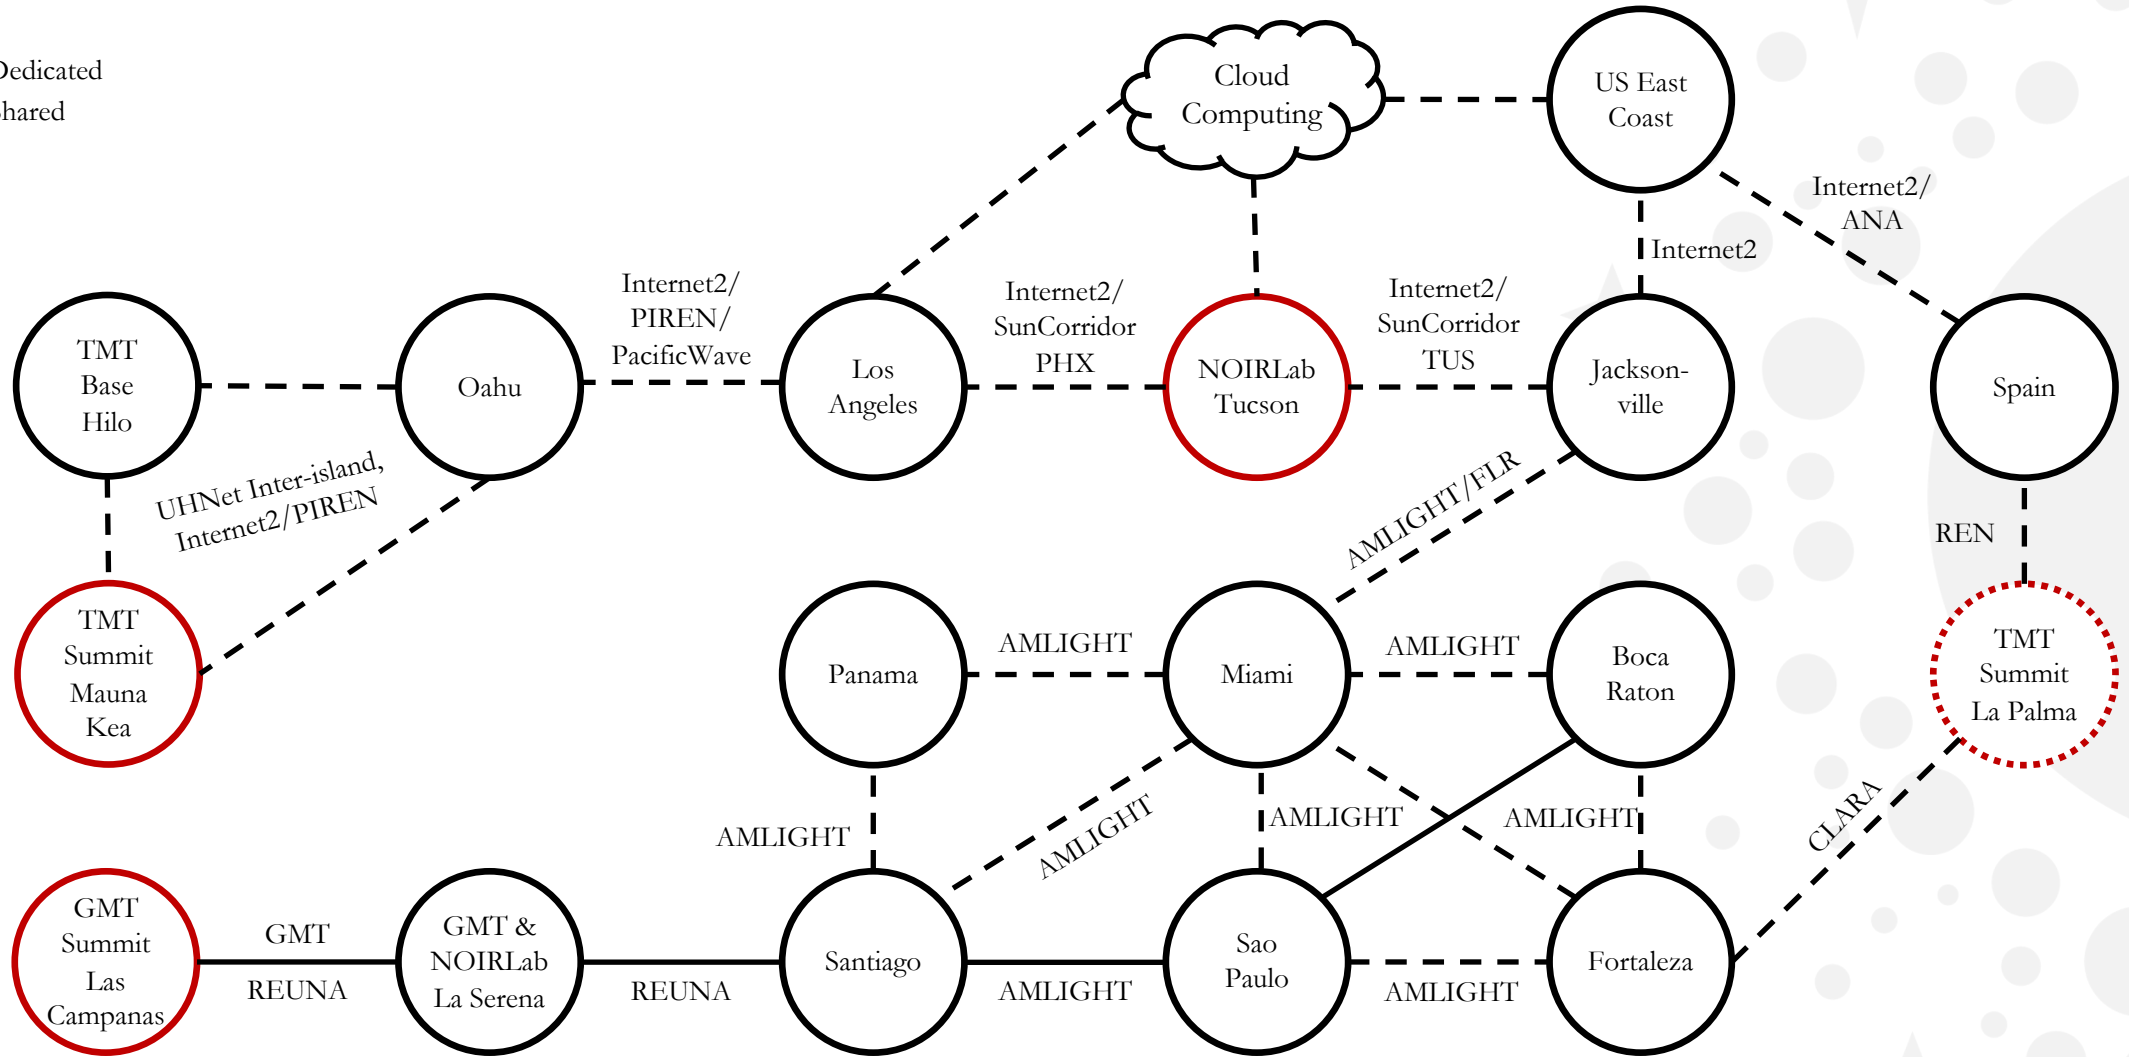

- Provide a level of support unprecedented for US ground-based OIR telescopes
- Provide researchers with uniform interfaces to TMT and GMT and their data
- Partner with TMT and GMT technical teams to develop requirements and define interfaces
- Minimize duplication of effort and define clear roles and responsibilities
- Inform design from existing NOIRLab systems where appropriate
- Upgrade based on lessons learned & specific US-ELTP requirements

- Science platform for data analysis by science teams or archival researchers
    - Computing and data storage resources
    - Library of common astronomical analysis software installed and available
    - Notebook computing environment to script data processing and analysis
    - Documentation and tutorials to assist users
    - Shared workspace, activities logging, and notifications for team collaboration
  - Teams can publish high-level contributed science products for long-term archiving and distribution by NOIRLab
  - Science program data are tracked through publication and archival data products
- ➔ Archival researchers find new uses for the KSP data products, make new discoveries, write new papers, submit new observing proposals ...

# Possible US-ELT Network Circuits

— Dedicated  
 - - - Shared

# More details about TMT

- Slides courtesy of Christophe Dumas, Observatory Scientist & Head of Operations, TMT
- See Sam Chan's talk (next) for details about GMT

# TMT location (Hawaii)

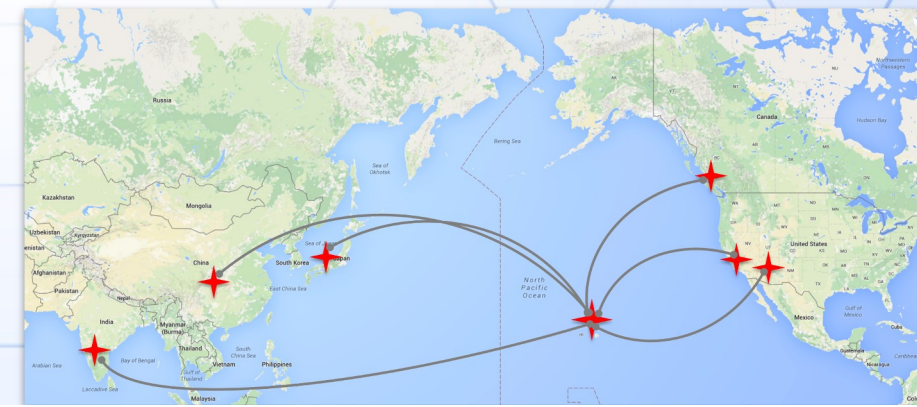

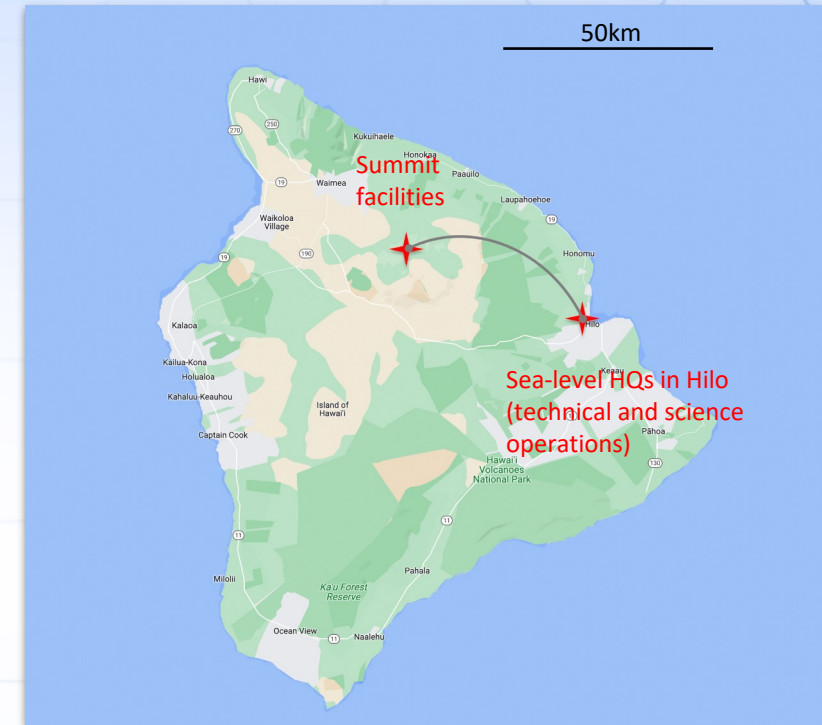

- ◆ **Sea-level HQs:**

- ◇ Location of main “Science-operations” control room
- ◇ Location of most staff, except for carrying out daily on-site maintenance activities, or during major interventions

- ◆ **Summit:**

- ◇ Only Telescope operators will be present at summit during nighttime operations
  - ◆ With a higher level of automation and safety measures in place, all nighttime staff could be located at sea-level. This might be considered in a future stage of operations

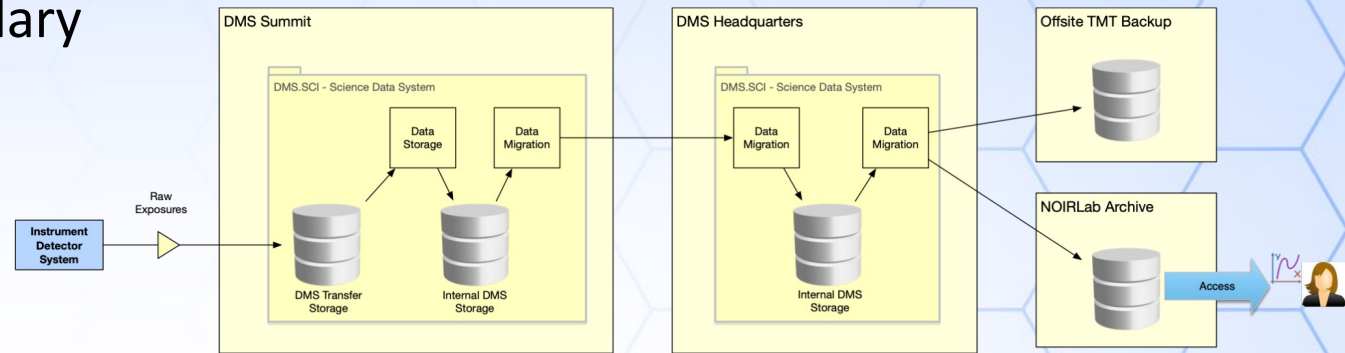

- ◆ TIO partners might develop their own **Remote Operations Centers**, to support their own community (science programs preparation & optimization, data-reduction, including remote observations)

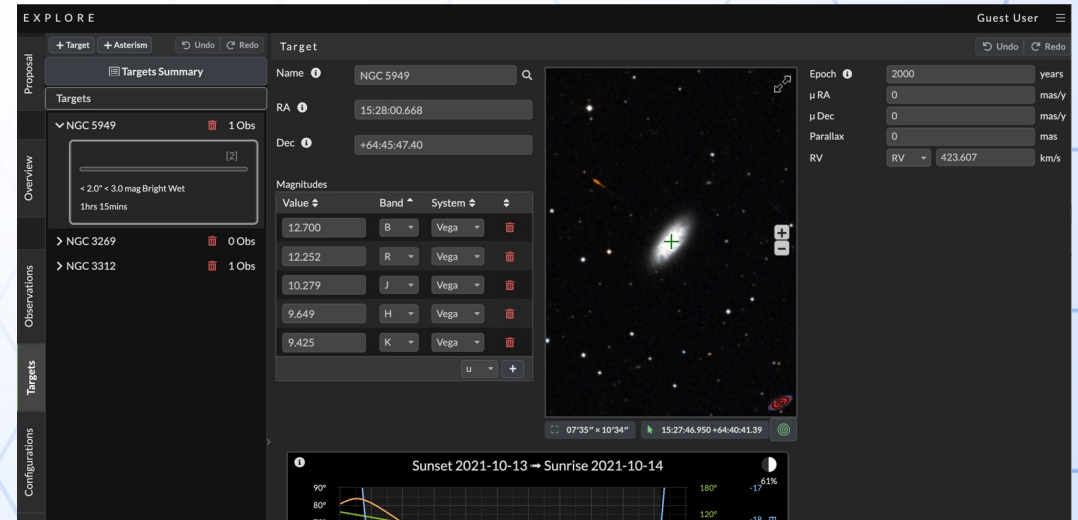

# TMT Data Management System (UPP's components)

- ◆ TMT Data Management System (DMS) reliably stores and tracks science exposures and ancillary files to support archive transfer.
- ◆ TMT DMS/UPP responsibilities and tasks:
  - ◇ Collaborating in design work with NOIRLab
  - ◇ Collaborating in development of data transfer / synchronization ICD and policies between TMT & UPP
  - ◇ Enabling the implementation of TMT's data transfer
  - ◇ Verifying and validating data transfer to US-ELTP Science Archive and integration with TMT DMS

Assets flow from TMT DMS at Headquarters/TMT Archive to USELTP Archive

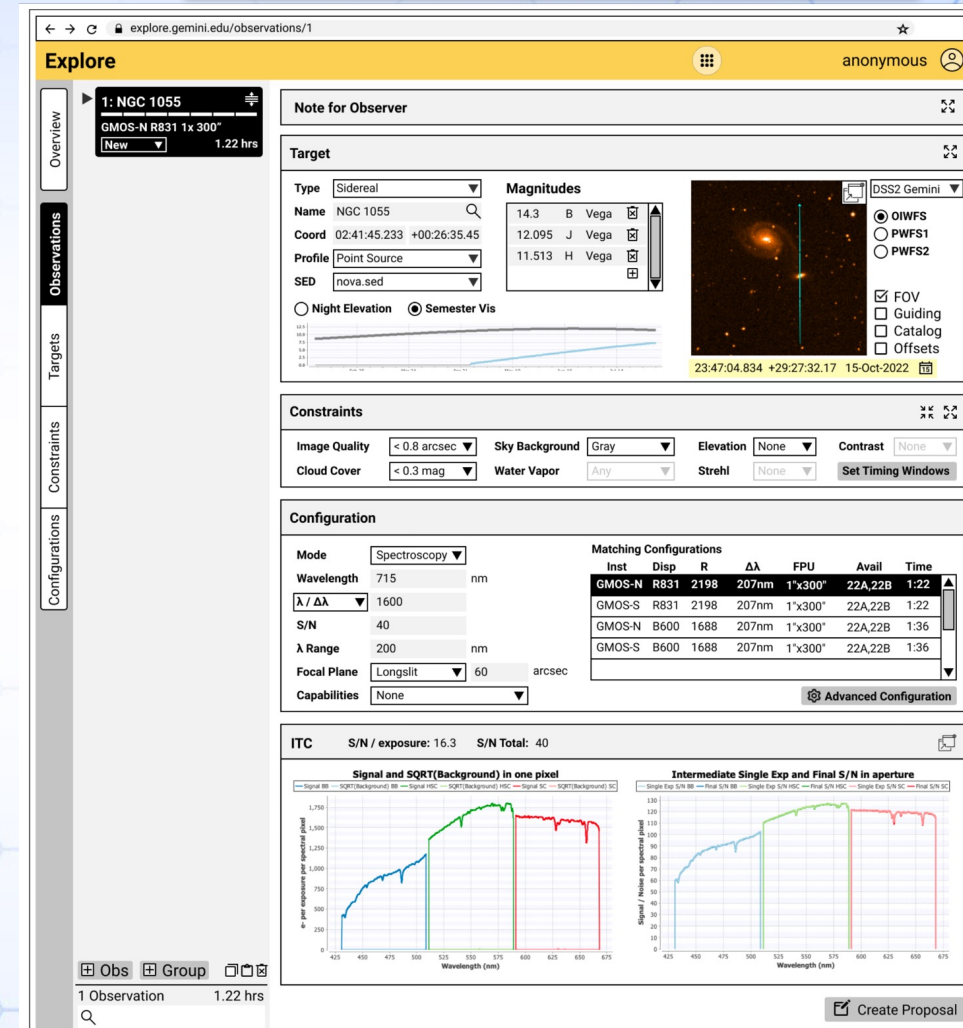

Figures from DMS design docs and GPP prototype

# TMT Data Management System (UPP's components)

- TMT Data Processing System (DPS) ensures commonality and standards for processing of all science instrument data
- TMT DPS/UPP scope and tasks:
  - Collaborating with NOIRLab to design the UPP's Explore Integration Time Calculators (Explore-ITC) tools and verifying/validating interfaces to instrument specifications
  - Collaborating and supporting the integration of TMT's data processing tools into the UPP environment
  - Testing, validating UPP tools for data processing

Figure is from Gemini GPP review documentation

The screenshot shows the Gemini Explore web interface for observation 1: NGC 1055. The interface includes a sidebar with navigation options (Overview, Observations, Targets, Constraints, Configurations) and a main content area with the following sections:

- Note for Observer:** A text input field.
- Target:**
  - Type: Sidereal
  - Name: NGC 1055
  - Coord: 02:41:45.233 +00:26:35.45
  - Profile: Point Source
  - SED: nova.sed
  - Magnitudes: 14.3 B Vega, 12.095 J Vega, 11.513 H Vega
  - Options: Night Elevation, Semester Vis, FOV, Guiding, Catalog, Offsets
- Constraints:**
  - Image Quality: < 0.8 arcsec
  - Sky Background: Gray
  - Elevation: None
  - Contrast: None
  - Cloud Cover: < 0.3 mag
  - Water Vapor: Any
  - Strehl: None
  - Set Timing Windows
- Configuration:**
  - Mode: Spectroscopy
  - Wavelength: 715 nm
  - $\lambda / \Delta\lambda$ : 1600
  - S/N: 40
  - $\lambda$  Range: 200 nm
  - Focal Plane: Longslit 60 arcsec
  - Capabilities: None
  - Matching Configurations table:
 

Inst	Disp	R	$\Delta\lambda$	FPU	Avail	Time
GMOS-N	R831	2198	207nm	1"x300"	22A,22B	1:22
GMOS-S	R831	2198	207nm	1"x300"	22A,22B	1:22
GMOS-N	B600	1688	207nm	1"x300"	22A,22B	1:36
GMOS-S	B600	1688	207nm	1"x300"	22A,22B	1:36
- ITC:**
  - S/N / exposure: 16.3 S/N Total: 40
  - Signal and SQRT(Background) in one pixel graph
  - Intermediate Single Exp and Final S/N in aperture graph

At the bottom, there are buttons for 'Obs', 'Group', and 'Create Proposal', along with a search bar and a '1 Observation 1.22 hrs' indicator.

# TMT Archives

**Summit Storage**

- Raw Science Files
- Calibration Files
- Science Metadata
- Ancillary Data
- Readouts
- Engineering Data
- Software Logs

**TMT Archive**

- Proposals
- Observation Plans
- Raw Science Files
- Calibration Files
- Science Metadata
- Ancillary Data
- Engineering Data
- Software Logs

**US-ELTP Archive**

- Proposals
- Observation Plans
- Raw Science Files
- Calibration Files
- Science Metadata
- Ancillary Data
- Readouts
- L2 Reduced Data

# Data Storage Facilities

Storage Location	Types of Data	Purpose	Lifetime	Access
Summit Storage	Observation Data, Metadata, Ancillary Data, Calibration Files, Logs	Immediate save of data, real-time access, short term backup	At least 3 months	Observatory Staff, pipelines and other software
	Engineering Data, Logs	Immediate save of data	At least 7 days	
TMT Archives (Engineering and Science Data)	All data except readouts	Local and/or cloud permanent store	At least 50 years	Observatory Staff, visitor and eavesdropping astronomers
US-ELTP Archive (hosted by NOIRLab)	Observation Data, Metadata, Ancillary Data, Calibration Files, Readouts	Archive, redundant permanent store	At least 50 years	Observatory Staff, Investigators/teams, public after proprietary period

- ◆ Multiple storage locations provide data durability
- ◆ Proprietary periods initially restrict access to data to PI and Partners
  - ◇ Policies still be being developed and finalized. DMS designed to be flexible.

# Instrument Usage Rates

## ◆ Early Operations:

- ◇ First light instruments
- ◇ First 5 years
- ◇ Weighted toward IRIS for “safer” estimate

## ◆ Steady-State

- ◇ First Light + First Decade instruments
- ◇ Rest of lifetime of observatory
- ◇ Approximates future instruments

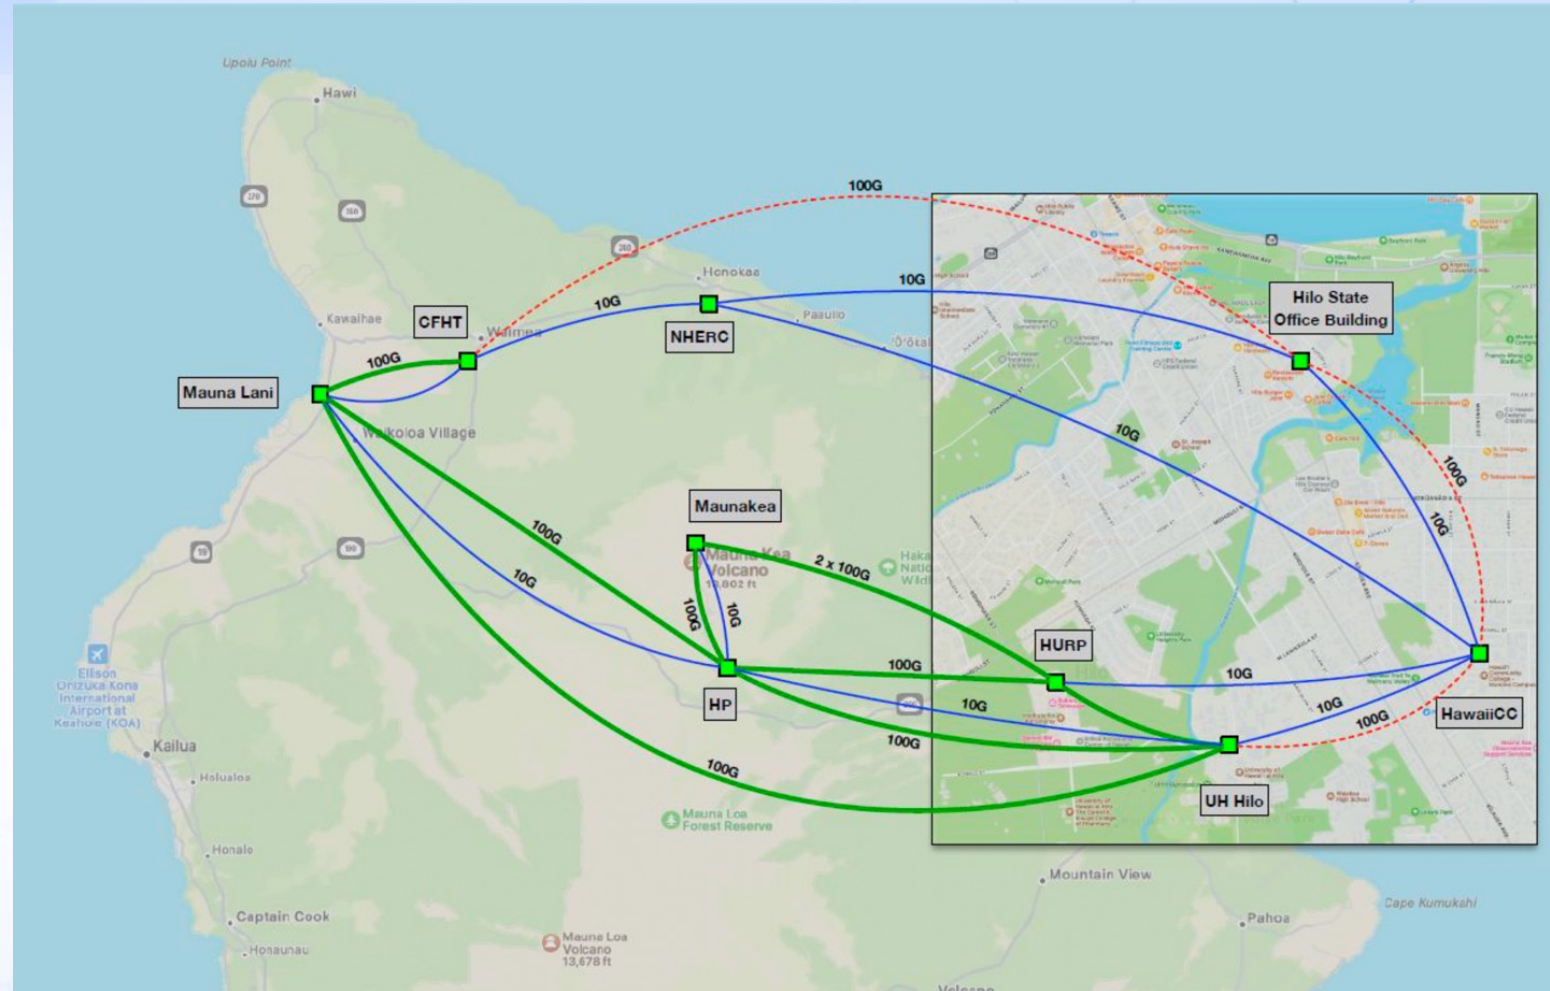

**Distribution of Instrument Usage**

	Early Operations	Steady-State
<b>IRIS</b>	75%	25%
<b>MODHIS</b>	10%	10%
<b>WFOS</b>	15%	25%
<b>PSI</b>	–	5%
<b>IRMOS</b>	–	5%
<b>HROS</b>	–	25%
<b>MICHI</b>	–	5%

Percentages are models for the purposes of data rate and storage estimates and are not requirements for instrument usage

# TMT Data Transfer (Hawaii)

Type of Data	Daily Rate (GB/day)
Science Exposures and Calibrations	598
Ancillary Data (without Readouts)	303
Saving individual readouts	2938
Engineering Data	372
Total	4211
Total without Engineering Data	3839

# Summary

- Open access to GMT+TMT will enable transformational research by US astronomers
- Outstanding user support will enable researchers to more fully achieve their scientific ambitions
- US-ELTP user services will broaden participation in science with TMT+GMT and their data, growing the research community and enhancing the scientific outcomes
- NOIRLab will work closely with the scientific community throughout the development and construction phases of the US-ELTP to ensure we build the systems that researchers need

# Thank you
