

ngVLA Project Update

Presented by Sanford George

NRAO Network Operations Manager

Credit to Rob Selina - ngVLA Project Engineer

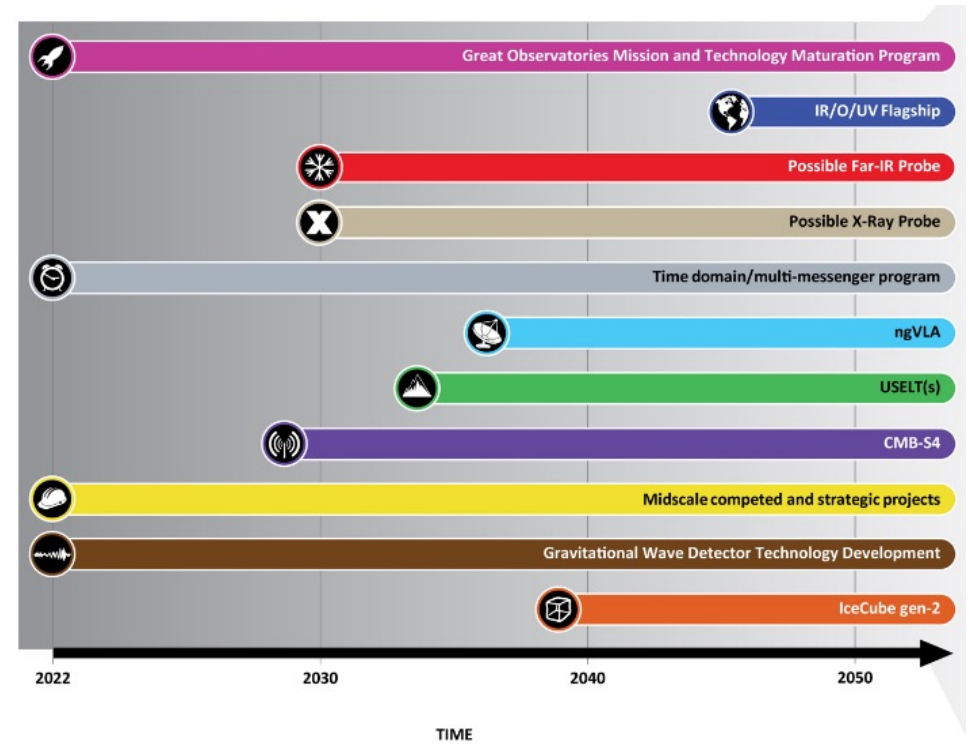

South American African Astronomy
Coordination Committee, 5/2025

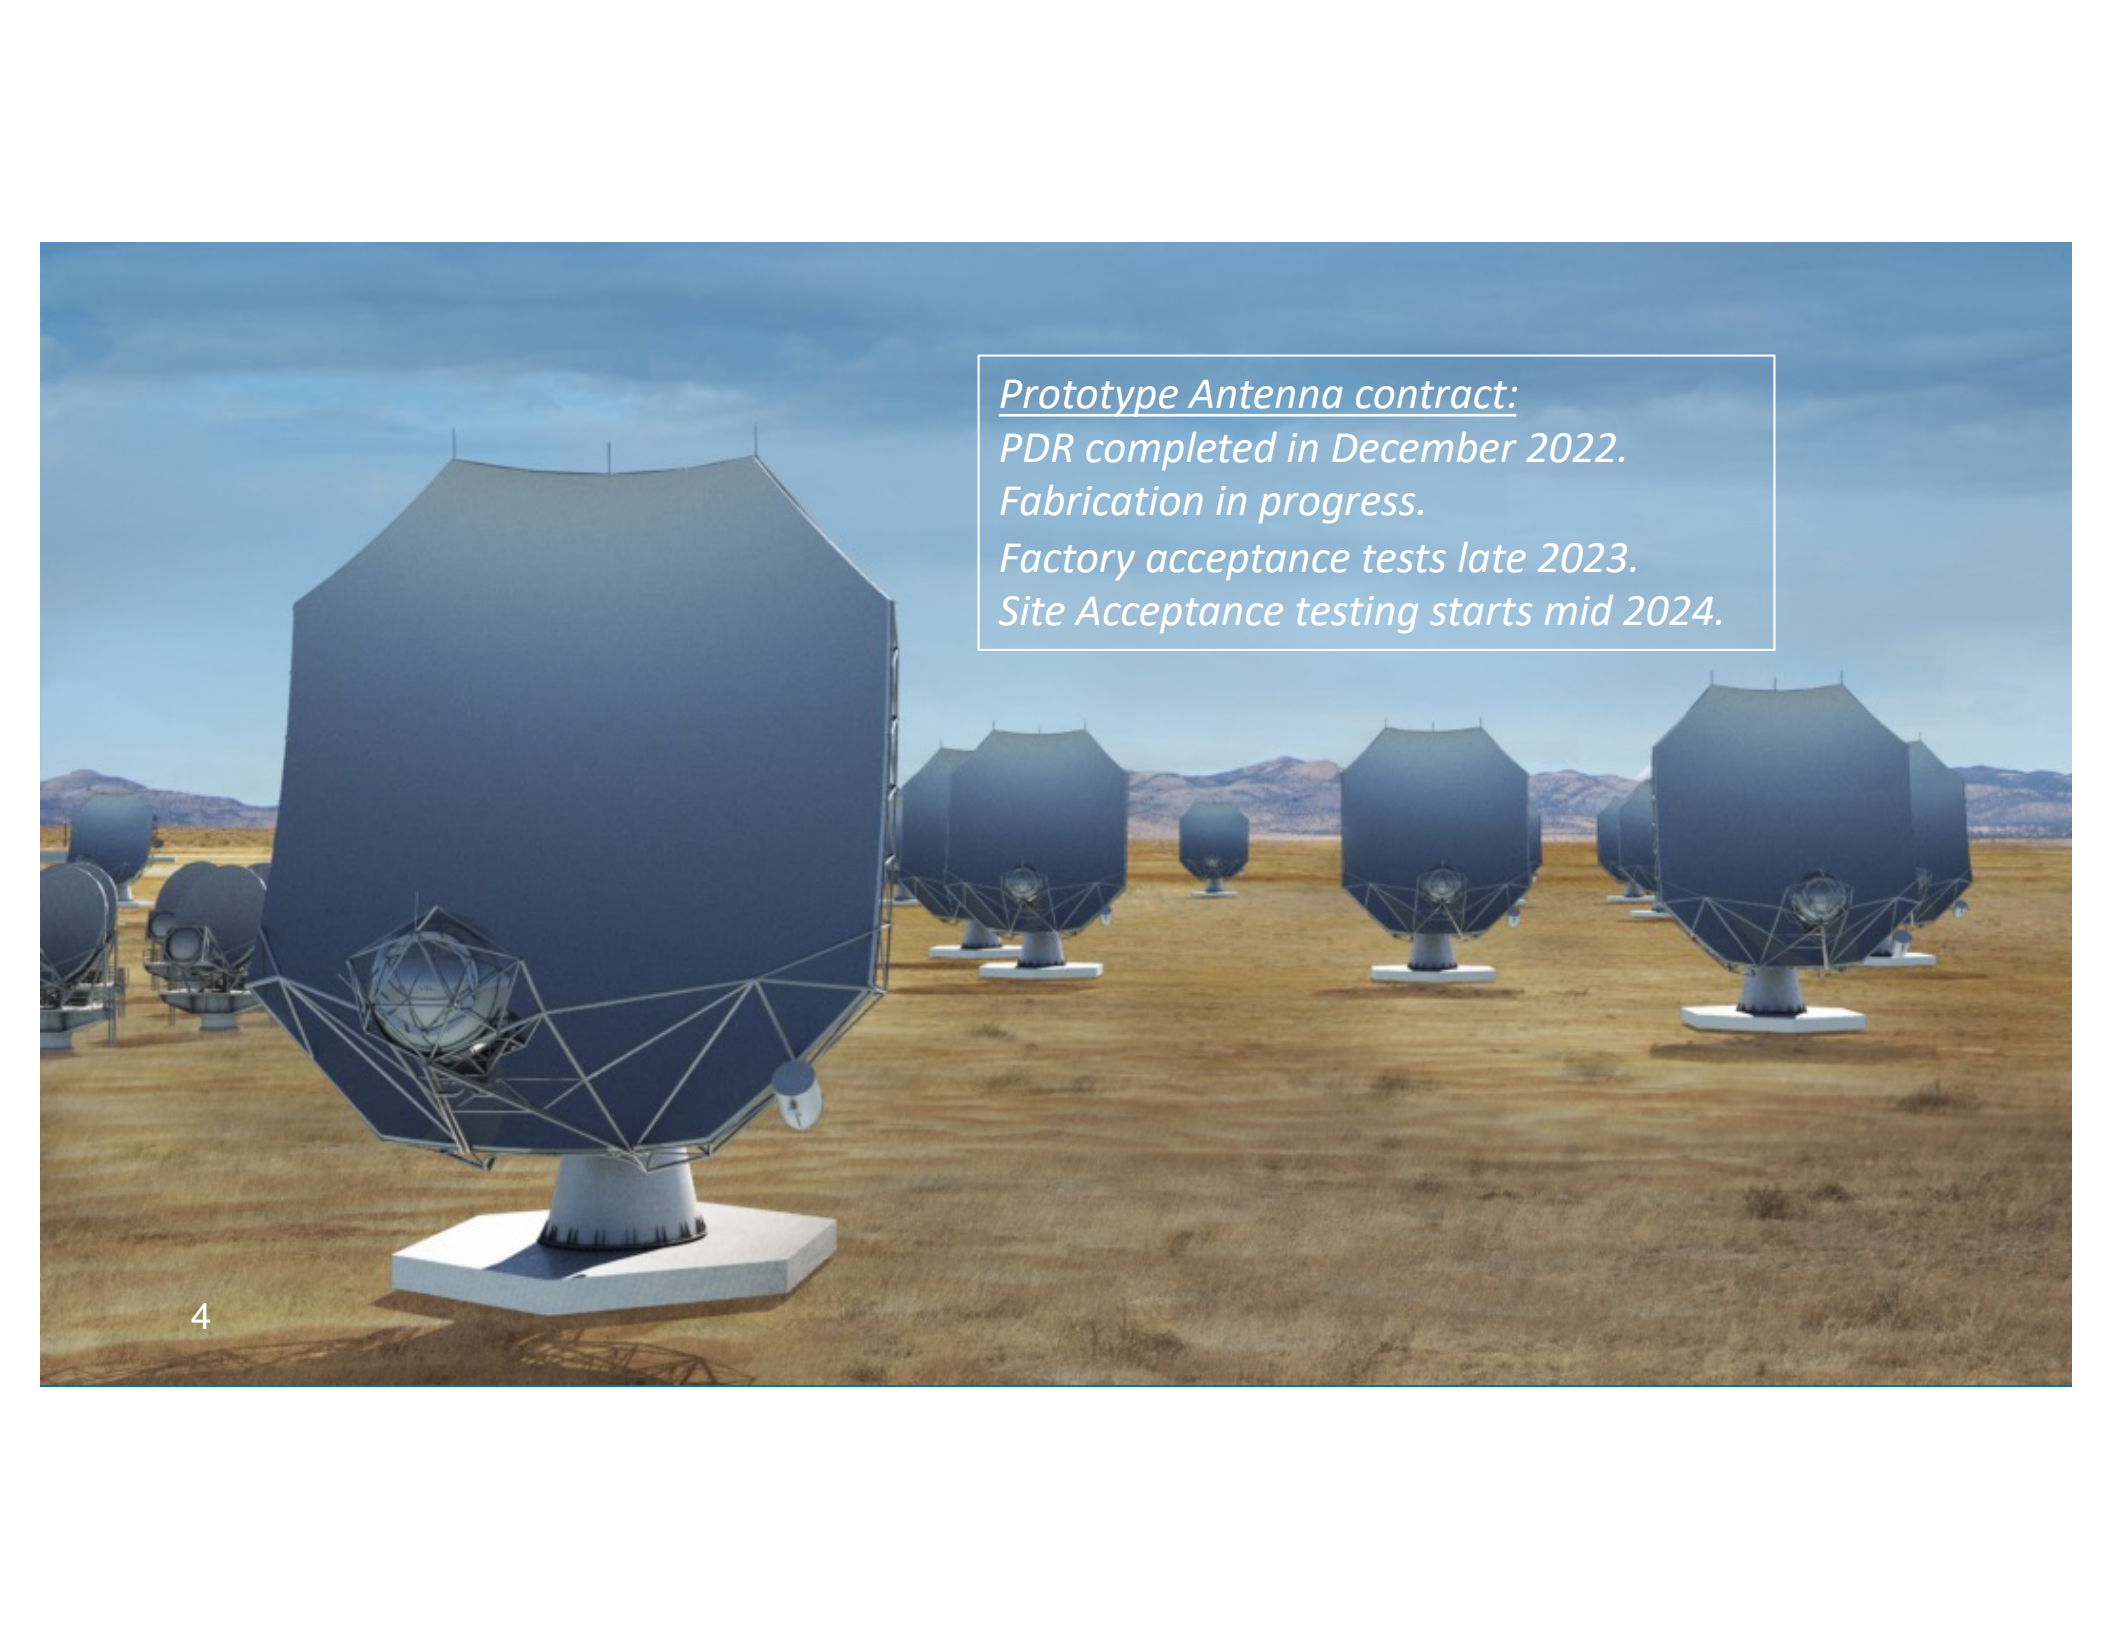

A next generation VLA

- Scientific Frontier: thermal imaging at milli-arcsecond resolution
 - 10x Sensitivity, 10-100x Resolution of VLA
 - Frequency range: 1.2-116 GHz
- Bridge SKA – ALMA
- Proposal driven, pointed telescope
 - Deep single fields, small area mapping.
- Centered on present location of VLA in Southwest USA
- Under evaluation as part of the Astro2020 Decadal Survey.

Astro2020 identified the ngVLA as a high-priority large, ground-based facility whose construction should start this decade.

A wide-angle photograph of a radio telescope facility in a desert. In the foreground, a large, dark, octagonal-shaped antenna is mounted on a white pedestal. It has a complex metal support structure and a smaller, spherical antenna at its base. Several other similar antennas are visible in the background, receding into the distance. The ground is dry and brown, and the sky is a clear, pale blue. In the far distance, low mountains are visible on the horizon.

*Prototype Antenna contract:
PDR completed in December 2022.
Fabrication in progress.
Factory acceptance tests late 2023.
Site Acceptance testing starts mid 2024.*

We're Live!

You're looking at a live view of the site at the VLA where the prototype ngVLA antenna is to be constructed. The camera is mounted on our Control Building and updates every 15 seconds. Inside the gravel circle you can see three circular antenna pads that were used during prototyping for the ALMA project. The ngVLA prototype antenna is destined for the third pad from the camera. In the distance you can see the VLA antennas currently residing on the east arm of the VLA.

ngVLA Prototype Construction Site

ngVLA prototype; installing a network switch
to connect the prototype to the VLA network.

ngVLA prototype;
inside the pedestal.

ngVLA prototype; ready to
mount the dish on the
pedestal.

ngVLA prototype; lifting the dish to mount on the pedestal.

ngVLA prototype; dish on the pedestal.

ngVLA prototype turned over to NRAO
by Mtex Antenna Technology to begin testing
4/24/2025.

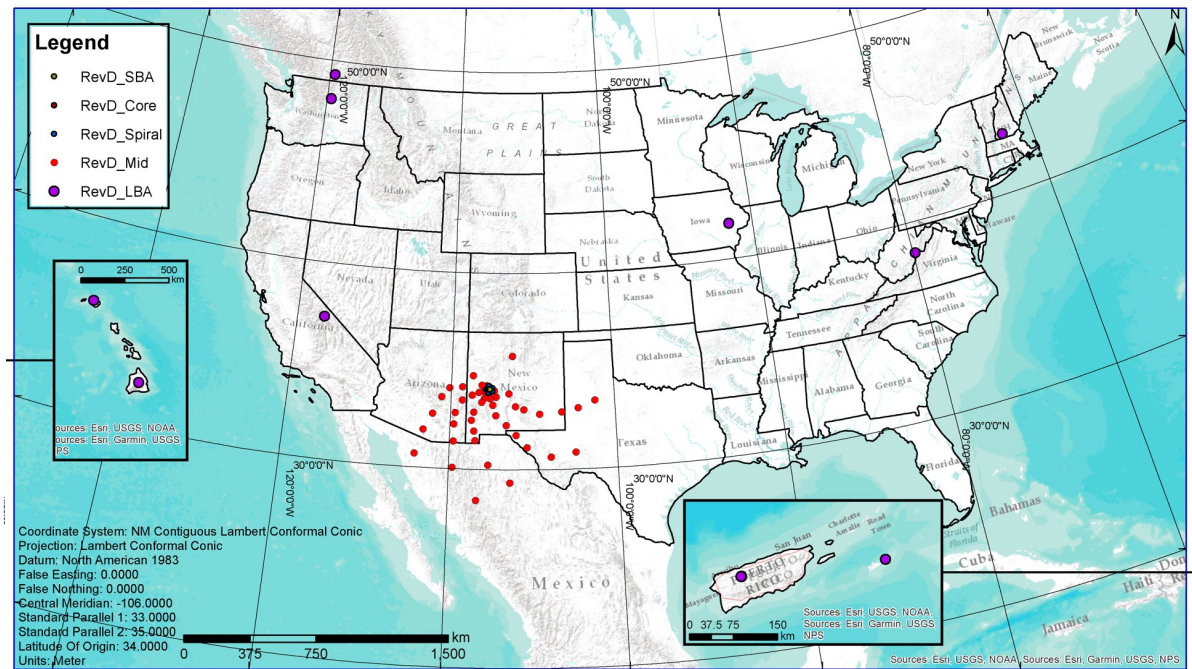

- **1.2 - 116 GHz** Frequency Coverage
- **Main Array:** 214 x 18m offset Gregorian Antennas
 - Fixed antenna locations across NM, TX, AZ, MX.
- **Short Baseline Array:** 19 x 6m offset Greg. Antenna
 - Use 4 x 18m in TP mode to fill in (u, v) hole
- **Long Baseline Array:** 30 x 18m antennas located across continent for baselines up to 8860km

Band #	Dewar	f_L GHz	f_M GHz	f_H GHz	$f_H : f_L$	BW GHz
1	A	1.2	2.35	3.5	2.91	2.3
2	B	3.5	7.90	12.3	3.51	8.8
3	B	12.3	16.4	20.5	1.67	8.2
4	B	20.5	27.3	34.0	1.66	13.5
5	B	30.5	40.5	50.5	1.66	20.0
6	B	70.0	93.0	116	1.66	46.0

Distribution of Antennas

Long Baseline Antenna Locations

Qty	Location	Notes	Qty	Location	Notes
3	Puerto Rico	Arecibo Site	3	Green Bank, WV	GBO
3	Immokalee, FL	New Site	3	Brewster, WA	VLBA Site
3	Kauai, HI	Kokee Park Obs.	3	High Park, WY	New Site
3	Hawaii, HI	Not MK Site	3	North Liberty, IA	VLBA site
3	Hancock, NH	VLBA Site	3	Owens Valley, CA	VLBA site

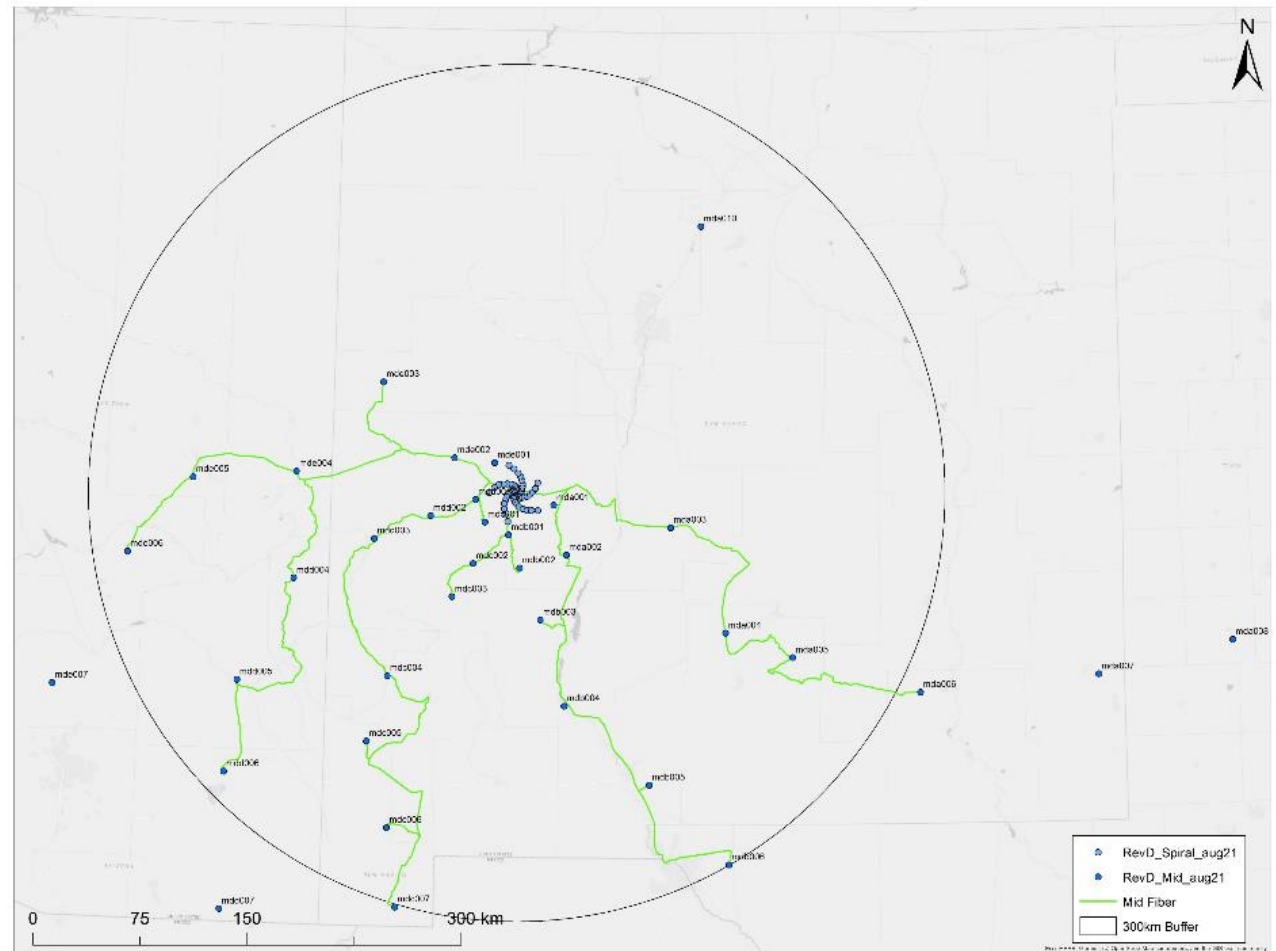

Antenna Data Rates

- Real-time correlation of all 244 18m array elements.
- Up to 20 GHz of instantaneous bandwidth per polarization.
- 8-bit digitization at all bands.
- 723 Gbps per antenna, over 2x400 Gbps links on ngVLA installed fiber.
- Requantized and formatted for data transmission on packet-switched networks
- ~3 antenna LBA sites = ~2.4 Tbps link (goal, TBC)

Main Array Fiber Optic Network

- Dedicated point-to-point fiber links for ~196 antennas in NM within ~300 km radius of core.
- ISP connected elements beyond inner stations.
- ISP connections to LBA sites.
- Leased fiber vs spectrum vs bandwidth (TBD)

Data Processing

- **Post Processing:** storing the raw visibilities will be possible.
 - Data processing is post-facto, with system sized for average throughput.
 - Data Rates:
 - Average – 8 GB/s.
 - Peak - 128 GB/s.
- **Computing:** Challenging, but feasible with current technology.
 - Sized by time resolution, spectral resolution, and multi-faceting in imaging.
 - ~60 PFLOPS/s (inc. efficiency factors) matches average data throughput.

Serving Data to Users

- “Science Ready Data Products” Operations Model
- Process-in-place for data to most PIs.
- Data products requested in proposal; Pipeline interaction possible.
- Low-level data products (visibilities, flagging tables)
- High-level data products for Standard Observing Modes (e.g., calibrated image cubes)
- Archive reprocessing interface for users.
- Data Reduction S/W; Data Analysis S/W
- Distributed archive and re-processing capacity amongst international partners? (ALMA-like model)
